PROFILE

After 11 years working in the pharmaceutical industry I am transitioning into frontend development. I love to learn and have completed several frontend courses with SheCodes. These have included learning React JS and responsive web development, and applying these to projects. Recently I have built a React-based weather application and a dictionary application, using APIs.

I have extensive experience working independently and in teams; within my department, across a cross-departmental project team, and with clients.

Outside of work I love to read and travel. I love experiencing new places and cultures, and am fortunate to have visited some amazing places in my life! I recently visited Costa Rica, and loved it so much I used it as inspiration for a responsive web development project.

EXPERIENCES

May2022-Present **Syneos Health**
Senior Safety & PV Specialist

- recently involved in performance quality testing for a database migration, including weekly status review calls with database specialists and transition vendor
- workflow manager - providing oversight of case data processing tasks by team members, to ensure compliance with internal and regulatory timelines
- report preparation for case status discussions with clients
- attending weekly meetings with project team and clients to discuss project activities

Mar2018-Apr2022 **Syneos Health**
Safety & PV Specialist II

- processing data received from clinical trial sites into database
- quality review of data entered by colleagues
- training and mentoring of new team members
- oversight and review of project finances regarding Safety tasks, and related discussions with project managers and clients
